4: Use a Virtual Appliance and UDRs

Install a Virtual Appliance

Create subnet App
Create Plaz-VM-App
Allow IP Forwarding
Install RRAS router

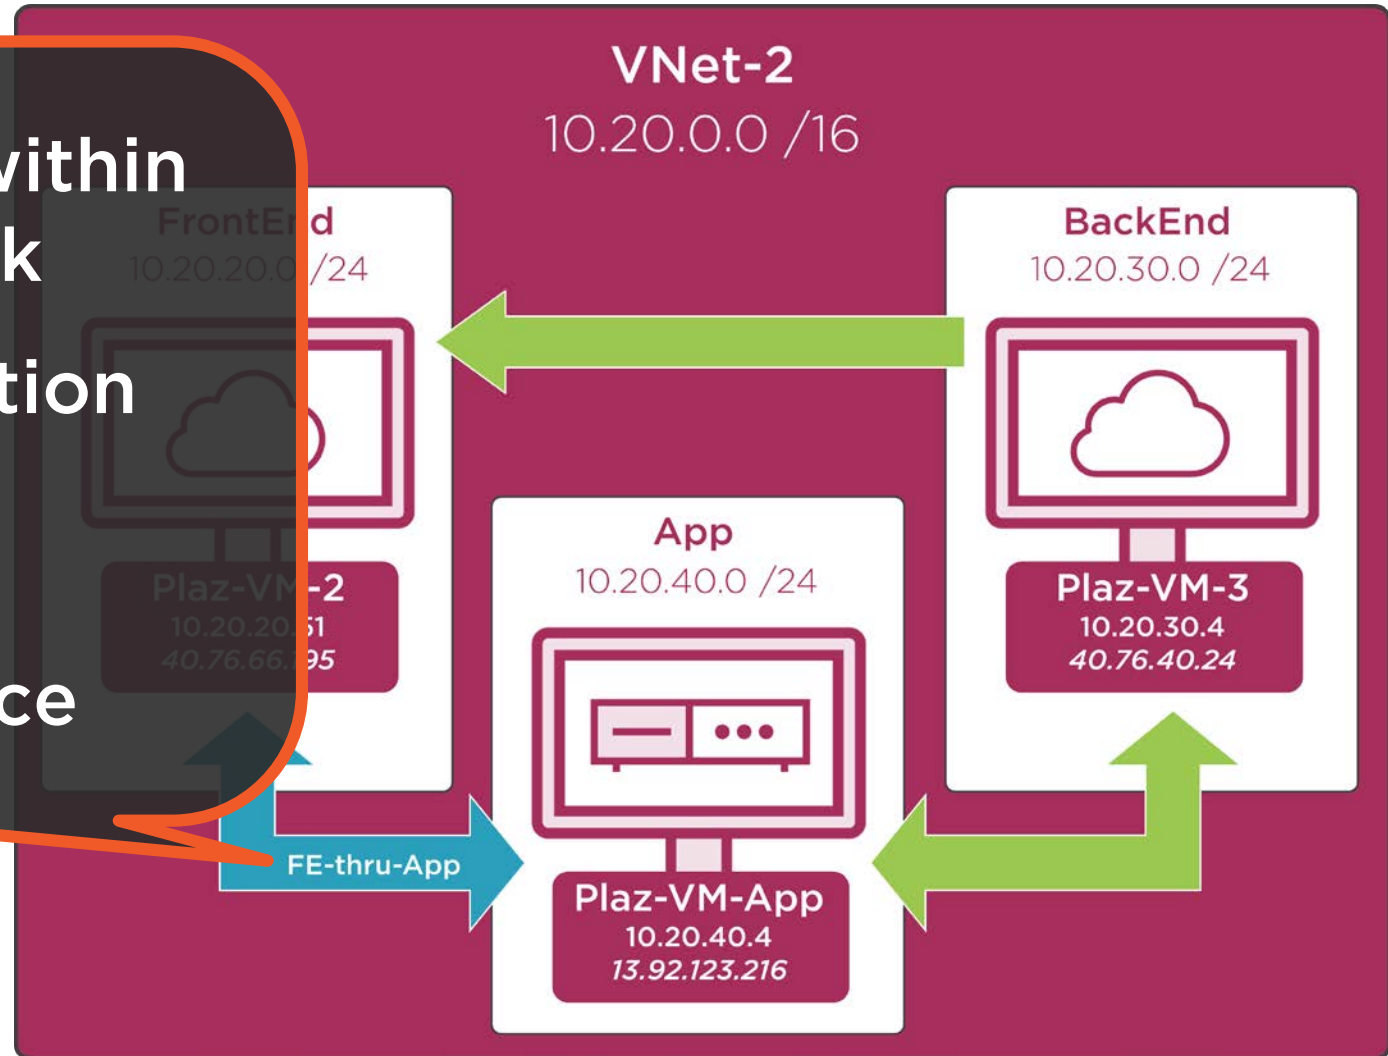

Set User Defined Route with Portal

**Control traffic within
a virtual network**

**For this destination
subnet go here**

**Hop Type is
VirtualAppliance**

Set User Defined Route with PowerShell

UDRBackEnd.ps1

**Force all traffic in VNet-2
thru the Plaz-VM-App**
